|---------------|--------------------------------------|---|
| | Instruction for Multi-Tiered | |
| ACCREDITATION | Cloud Computing Security | _ |
| | for Certification Bodies | |

| Document No: | USACC-IN-24 |
|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

1 Scope

1.1 This document specifies the supplementary United States Accreditation, INC. criteria for Certification Bodies (CBs) certifying Multi-Tiered Cloud Computing Security (MTCS) management system.

1.2 This document is to be used with ISO/IEC 17021-1 and applicable IAF Mandatory Documents. Please refer to ISO/IEC 17788 Information technology — Cloud computing — Overview and vocabulary for terms & definitions.

2 Criteria for MTCS Auditors

- 2.1 A certification body shall appoint qualified auditors to conduct MTCS audits.
- 2.2 Auditors shall meet the criteria as defined in Annex A (Normative) of this document..

3 Duration of MTCS Audits

3.1 Where applicable, references shall be made to IAF Mandatory Document 5 (IAF MD 5).

3.2 In determining the audit duration, a CB shall determine the number of personnel doing work under the organisation's control for all shifts.

3.3 For initial audit, the starting point for an average audit duration (Stage 1 + Stage 2) shall be as indicated in Table 3-1.

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | for certification bodies | | |

Table 3-1: Relationship between Number of Personnel and Audit Duration

| Number of Personnel doing Work under the Organisation's Control | Initial Audit Duration (Stage 1 + Stage 2) |
|---|---|
| 1-10 | 5 auditor days |
| 11-25 | 6 auditor days |
| 26-45 | 7 auditor days |
| 46-65 | 8 auditor days |
| 66-85 | 9 auditor days |
| 86-175 | 10 auditor days |
| 176-275 | 11 auditor days |
| 276-425 | 12 auditor days |
| 426-625 | 13 auditor days |
| 626-875 | 14 auditor days |
| 876-1,175 | 15 auditor days |
| 1,176-1,550 | 16 auditor days |
| 1,551-2,025 | 17 auditor days |
| 2,026-3,450 | 18 auditor days |
| 3,451-4,350 | 19 auditor days |
| 4,351-5,450 | 20 auditor days |
| 5,451-6,800 | 21 auditor days |
| 6,801-10,700 | 22 auditor days |
| >10,700 | Follow progression above |

a. For requirements for stage 1 and stage 2 audits, CBs shall refer to clause 9.3 of ISO/IEC 17021-1

b. The numbers of personnel in Table 3-1 should be seen as a continuum rather than a stepped change.

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | | | |

c. The CB's procedure may provide for audit duration for number of personnel doing work under the organisation's control for all shifts exceeding 10,700. Such audit duration should follow the progression in Table 3-1 in a consistent fashion.

d. Based on the impact level, additional auditor day shall be added. See clause 3.4.

3.4 Impact Level

Table 3-2: Relationship between Impact Level and Additional Auditor Day

| Impact Level | Additional Auditor Day (minimum) |
|--------------------------|-------------------------------------|
| Level 1- Low impact | 0 auditor day added |
| Level 2- Moderate impact | 1 auditor day added |
| Level 3- High impact | 2 auditor days added |

Table 3-2 is only applicable to

- a. laaS and PaaS (Infrastructure as a Service); or
- b. SaaS (Software as a Service) with IaaS together

c. For certification of SaaS running on MTCS certified infrastructure, the audit man-days may be reduced up to 30%. The reduction is due to SaaS certification being done on an accredited MTCS certified infrastructure.

3.5 Multi-sites Audit

The size of the sample shall follow IAF Mandatory Document (MD) 1 on Audit and Certification of a Management System Operated by a Multi-Site Organisation.

- 3.6 Other factors to considered for determination of audit duration
- a. No. of platforms or complexity of the cloud environment
- b. No. of data centres
- c. Risk level (low, medium, high)

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | | | |

3.7 Organisations with accredited ISO/IEC 27001 Certification

If an existing organization has already been certified to ISO/IEC 27001, CB may reduce the minimum number of auditor days as specified in Table 3-1 by up to 50% provided the following conditions are met; Computed auditor days after the reduction for initial audit is at least 5 auditor days

3.8 CB shall calculate the audit duration. In all cases where adjustments are made to the audit duration provided in Table 3-1, sufficient evidence and records shall be maintained to justify the variation.

3.9 In order to ensure effective audits being performed and to ensure reliable and comparable results, the audit duration provide in Table 3-1 shall not be reduced by more than 30%. Appropriate reasons for the deviation shall be established and documented.

3.10 Surveillance audit duration shall be 1/3 of initial audit duration.

3.11 Recertification audit duration shall be 2/3 of initial audit duration.

3.12 If after the calculation the result is a decimal number, the number of auditor days should be adjusted to the nearest half day (e.g. 1.3 auditor days becomes 1.5 auditor days, 1.2 auditor days becomes 1 auditor day).

4 Scope Statement

- 4.1 The scope statement shall at least include the following:
- a. Level of MTCS to be certified
- i. MTCS Level 1: Non-business critical data or systems; or

| Document No: | USACC-IN-24 |
|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

- ii. MTCS Level 2: Business critical data or systems; or
- iii. MTCS Level 3: Specific requirements and more stringent security requirements
- b. Name of service provider (legal entity)
- c. Business address (office/operation address)

d. Name of services being certified, if the Cloud Service Provider (CSP) is offering different services or products

e. Service model or role of CSP. E.g. Infrastructure provider, application programming interface (API) or platform provider etc.

f. For MTCS level 2 and 3 certification - the data storage locations must be listed in appendix for information.

- g. Where applicable, Compensatory Controls (CC) declared applicable/not applicable
- h. Where applicable, extension of scope (See clause 4.3)

4.2 For example,

Level 2 of Multi-tier Cloud Security System (MTCS) of Company A located at

<address> supporting the provision of ABC

<service name> services using laaS

<service type> model

Compensatory Controls: XXXX (Version 1.0 dated XXX) ABC's services comprise of:

- a) Compute Services <At location One>
- b) Storage Services <At location One and location Two>

4.3 Extension of Scope

Cloud native technologies empower organisations to build and run scalable applications in modern, dynamic environments such as public, private, and hybrid clouds. Containers, service meshes, microservices, immutable infrastructure, and declarative APIs exemplify this approach. Specifically, TR Cloud Native defines three common characteristics of Cloud Native architecture to scope its recommendations, for example:

a. Use of Container technologies

| Document No: | USACC-IN-24 |
|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

- b. Use of Microservices-based technologies
- c. Use of DevOps pipeline

5 Applicability and Compensating Controls

5.1 Generally, all the main clauses and critical clauses (e.g. clause 18.6 physical security) shall be applicable.

5.2 Annex B (Informative) of this document provides examples of exclusions of controls and design/use of compensating controls. The level of security or validity of MTCS certification shall not be compromised with the control exclusions and design/use of compensatory controls.

6 Additional Guidance

6.1 The Scope and ICT Supply Chain consideration is available in Annex C (Informative).

6.2 Guidance for Certification of Different Types of Cloud Services is available in Annex D (Informative)

7 Implementation

7.1 This instruction is a part of USACC-G-28 Guidelines for Accreditation of Conformity Assessment Bodies and USACC-P-01 Accreditation Procedure of CABs, these will be use together. Cannot be used separately.

Annex A (Normative)

Criteria for MTCS Auditors

The summary of the criteria for MTCS Auditors is shown in **Table A-1**.

Table A-1: Summary of Criteria for MTCS Auditors

| UNITED STATES ACCREDITATION |
|-----------------------------------|
|-----------------------------------|

| United States Accreditation, | | |
|---------------------------------|--|--|
| INC. | | |
| Instruction for Multi-Tiered | | |
| Cloud Computing Security | | |
| for Certification Bodies | | |

| Document No: | USACC-IN-24 |
|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

| Criteria | MTCS Auditor | MTCS Lead Auditor | |
|-------------------------------|--|---|--|
| Ethics & attributes | 1. Demonstrates personal attributes for effective and efficient performance of audits | | |
| | | and | |
| | Information security, cybe | ould follow ISO/IEC 27007:2020 rsecurity and privacy protection – n security management systems | |
| Qualifications and Experience | 1. Degree in Information | on Technology/Computing | |
| | At least 4 years full time working experience which includes minimum of 3 years full time professional work experience in Information Systems auditing, control or security work experience | | |
| | or | | |
| | 2. Diploma in Information Technology/Computing | | |
| | At least 5 years full time working experience which includes minimum of 3 years full time professional work experience in Information Systems auditing, control or security work experience | | |
| Criteria | MTCS Auditor | MTCS Lead Auditor | |

| Document No: | USACC-IN-24 |
|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

| Auditor | 1. Successfully completed and passed |
|----------|---|
| Training | |
| 5 | a. Certified Information Systems Auditor (CISA; or b. Recognized Auditor / Lead Auditor course for Information Security management systems |
| | and |
| | 2. Auditors with less than 2 years of experience working in cloud industry providing cloud service shall attend course on cloud knowledge with the following content: |
| | a. Fundamental of Cloud computing: i. Definition of cloud computing ii. Components of cloud infrastructure iii. Cloud computing model and operation |
| | b. Cloud Computing Security i. Infrastructure security for cloud computing ii. Assessment of the infrastructure security for cloud computing iii. Security basics of different cloud service models iv. Security of Cloud computing deployment models v. Data protection and security for cloud computing vi. Security of cloud applications and users vii. Knowledge in virtualization and technology |
| | c. Manage cloud computing security and risk i. Risk and governance ii. Legal and compliance iii. Audit iv. Portability and interoperability v. Incident response |
| | In addition to the above, auditors (regardless of years of experience) auditing cloud native shall attend course on cloud knowledge with the following content: |
| | a. Cloud Computing Security i. Security of common technologies and techniques (suchas container, micro-services and DevOps pipeline) |

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | ior certification boules | | |

| Criteria | MTCS Auditor | MTCS Lead Auditor |
|--|--|--|
| Audit Experience | Performed a minimum of 4 Information Security Management System (ISMS) audits as a qualified ¹ ISMS auditor within a 2-year period with a minimum of 10 auditor days on site. The 2-year period shall be within immediate past 5 years. | Performed a minimum of 7 Information Security Management System (ISMS) audits as a qualified² ISMS auditor within a 2-year period with a. A minimum of 10 auditor days on site; and b. At least 3 of these audits shall be in the capacity as the lead auditor The 2-year period shall be within immediate past 5 years. |
| Maintenance of qualification (once every 3 years) | Performed a minimum of 5 MTCS ² or ISMS audits at the end of an immediate past 3-year cycle | Performed a minimum of 5 MTCS ³ or ISMS audits at the end of an immediate past 3-year cycle with: a. At least 2 of these audits performed shall be in the capacity as the lead auditor |

¹ Qualification of MTCS auditor can be done internally by the certification body to perform third-party MTCS audit

² MTCS or ISMS audits include initial, surveillance or recertification audits. 2nd party audits (supplier / vendor audits) performed based on ISO 27001 can be considered as auditexperience stated in this document. All audits have to include the critical processes.

Annex B (Informative)

Scope and ICT Supply Chain Consideration - Four patterns to consider in scoping

1. Simple case

a. CSP Office located at one location, owns a DC in containing the infrastructure the same country and offers Cloud Services only in that country.

b. The Cloud service does not incorporate any service from another CSP and offers only IaaS

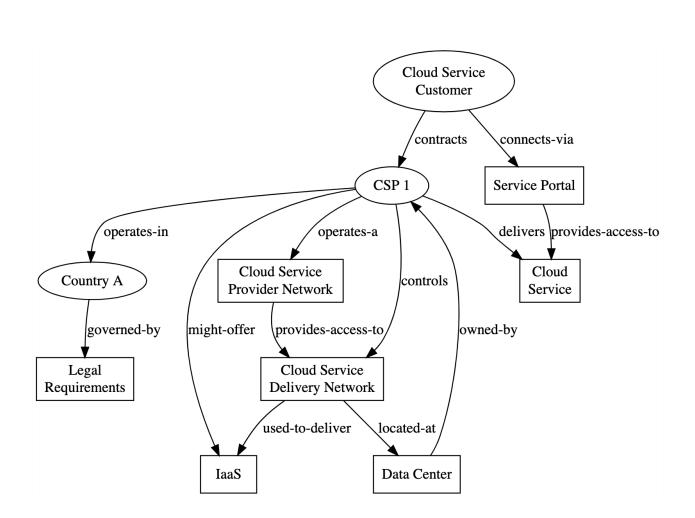

c. Customer service provided from its own servicer center

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | for certification bodies | | |

- d. The cloud self provisioning portal is developed by itself
- e. The cloud service network is bought out-of-the-shelf

The figure below shows relations of concepts, entities and interfaces to be considered in scope definition:

2 Common case

- d. The CSP has several cloud capabilities and service categories
- e. It has limited ownership over cloud technology or build on open stack
- f. Uses a colocation site and relies on utilities and services provided by the colocation provider

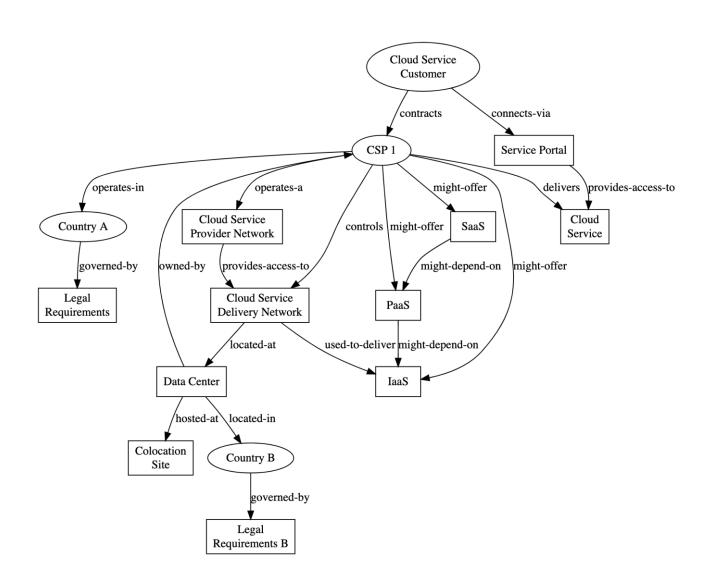

USACC-IN-24-01/04/2021

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | ior certification bodies | | |

- g. It operates in several countries under several legislations
- h. The service portal is developed by a third party
- i. Incorporates other's cloud service solutions

The figure below shows relations of concepts, entities and interfaces to be considered in scope definition:

| UNITED STATES ACCREDITATION | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|-----------------------------------|--|-------------------|-------------|
| | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | for certification bodies | | |

3. International CSP owning the technology

a. HQ in a country and cloud customers are from other country

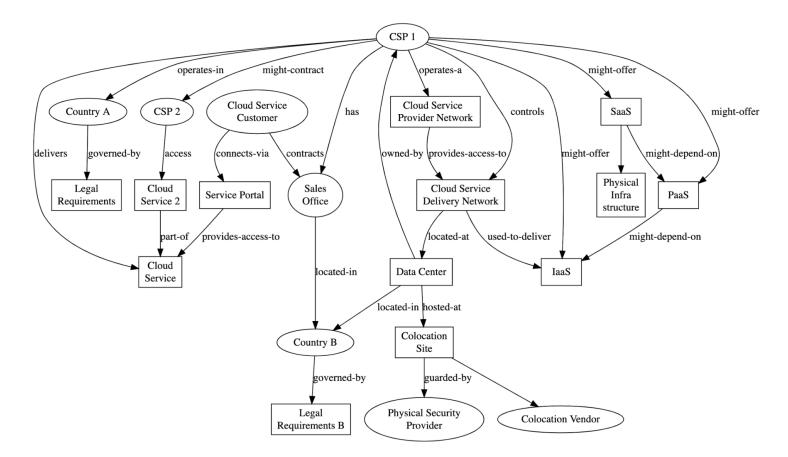

b. The CSP has a sales office in a foreign country and concludes contracts under legal requirements of its country.

- c. DC in a colocation site owned by another entity
- d. Service offered regional
- e. Incorporates other's cloud service solutions

The figure below shows relations of concepts, entities and interfaces to be considered in scope definition:

Figure C-3: International CSP Owning the Technology

4. Telcom case

a. The CSP has limited or no cloud technology expertise and limited control over the development of the cloud delivery network components and its operation of a cloud management network depends on a technology provider.

b. The CSP brand the cloud service under its own brand but does not have governance over the cloud technology

c. Represented by a sales office acting as CSP in a legal sense

United States Accreditation, INC. Instruction for Multi-Tiered Cloud Computing Security for Certification Bodies

|-------------------|-------------|
| Release Date: | 01/04/2021 |
| Rev Date / No: | 0 |
| | |

Annex D (Informative)

Guidance on Certification of Different Types of Cloud Services

1. How does MTCS certify SaaS?

a. MTCS certification is about certifying cloud services offered by CSPs, not on a product or the CSPs.

b. To certify SaaS under MTCS, besides the application/SaaS, the underlying infrastructure, network, platform, storage & data segregation (infrastructure & platform security), cloud operations and services administration needs to be audited/assessed end-to-end as per requirements.

c. MTCS certification of a SaaS owned by an Independent Software Vendor (ISV) but hosted and offered at a cloud provider X cannot claim the same certification of the SaaS when hosted and offered at another cloud provider Y operating under a different infrastructure & platform environment. A separate independent MTCS audit/assessment for the provider Y underlying infrastructure is needed.

2. Should SaaS ISVs view the CSPs hosting them as their 3rd party (infrastructure) service providers and manage as such?

a. Unless due diligence and thorough risk assessment have been performed, considering all clauses as defined by the standard for the 3rd party as per clause 9.1.2, the underlying infrastructure, network, platform, storage & data segregation, cloud operations and services administration, compliance of underlying infrastructure to MTCS standards cannot be assumed.

3. What are the most effective ways to have SaaS MTCS certified?

a. SaaS ISVs could host its application/software on a MTCS certified infrastructure (IaaS) service to ensure the underlying infrastructure and network are already in compliance with MTCS standards.

| | United States Accreditation, INC. | Document No: | USACC-IN-24 |
|--------------------|--|-------------------|-------------|
| U.S. ACCREDITATION | Instruction for Multi-Tiered | Release Date: | 01/04/2021 |
| | Cloud Computing Security for Certification Bodies | Rev Date / No: | 0 |
| | Tor certification bodies | | |

b. The certification of SaaS could then focus on its application/software integration and interfaces with the underlying certified infrastructure, network, platform, storage & data segregation, both technically and operationally, to achieve end-to-end security as per requirements

4. What are the levels that SaaS ISVs could be certified when hosted on a MTCS certified (IaaS) infrastructure service providers?

a. If the underlying infrastructure (IaaS) service provider has been certified to MTCS level X, the SaaS hosted in this certified infrastructure can only be, at best, certified to same MTCS level X (or lower levels).
